PRO SHADE SYSTEM

Enhance Your Ride

Made for riders, by riders

Provides shade and reduces glare in addition to acting as a peak.

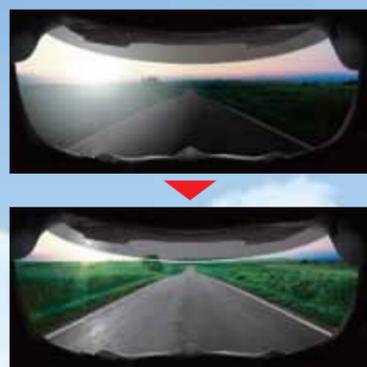

Brings Comfort To Everyday Commutes And Long Touring Rides.

Adventure touring riders love the benefits of having the peak on their XD-4 helmets when riding towards the sun, especially at sunrise or sunset. Touring riders also get similar results from the CT-Z. What about the rest of us?

The new Arai Pro Shade system replaces the face shield of any of our current full-face helmets that use the SAI-type shield. When raised, the shield works like a peak, and minimizes glare when the sun is higher in the sky. Lowering the shield reduces the amount of light entering the helmet, particularly beneficial when the sun is lower in the sky. The shield can be quickly and easily raised and lowered by the rider depending upon riding conditions.

The movable portion of the shield is designed to break away easily in the event of an impact, and does not compromise the energy management capability engineered into the helmet shell. Why limit yourself by choosing a helmet brand with only one feature, when you can add the Pro Shade System to any of these Arai helmets and get additional benefits you didn't even realize you needed- until now!

The Pro Shade System not only offers a quick, convenient shade to block ambient light, but also the benefit of an aerodynamic peak to block sudden bursts of light when cresting a hill, rounding a canyon bend or exiting a tunnel with just a subtle dip of your head allowing your hands to stay right where they need to be.

PRO SHADE SYSTEM

Enhance Your Ride

The Pro Shade System comes installed on a MAX-V Brow Vented shield, providing an excellent field of view and maintaining the benefits of Arai's Brow Vent intake ducts. The optional Clear MAX-V BV Pin Lock anti-fog insert, shown, reduces fogging without reducing your field of view.

CONVERTS IN SECONDS!

PEAK configuration

In this configuration, the peak reduces sun glare. And the intelligent lock system prevents the shade from dropping unexpectedly from wind pressure.

Functions as a peak

Functions as a smoke shade

SHADE configuration

The Pro Shade System reduces the amount of light that comes into the eye port, but is designed to raise quickly should light conditions darken unexpectedly.

Easily lifted at the center with your thumb, then locked by pushing back to secure both pivot points.

Simply pull shade forward at center to disengage locks at both pivot points, and lower shade.

The Pro Shade System lens is designed to break away in an impact.
